After S1: create conversation, store messages, cross-tenant denied
After S2: visitor chat works end to end, dedupe and reconnect
After S3: upload document, ingestion status, retrieval with sources
After S4: grounded FAQ answers, fallback, provider timeout handled
After S5: order lookup tool, tool audit, human takeover with context
After S6: tickets, versions and rollback, tracing, eval, runbooks
After S7: one spoken turn linked to conversation
After S8: interrupt, mix text and voice, voice handoff
